## Sale Average

FD	SD	CV	CF
18.6	3.1	16.8	99.3

## Carcase Measurements

Eye muscle depth and fat depth were measured 10th August 2018. BWT% uses the body weight taken the same day.

## Shearing

Lots 1 to 9 were blade shorn on 1st March 2018. Lots 10 to 103 were machine shorn 3rd April.

## Australian Sheep Breeding Value (ASBV)

An ASBV is an estimate of the genetic potential a sheep will pass on to its progeny. The accuracy of these values is printed on each ram's pen card. These values can be used as another tool in your ram selection process but not in place of visual assessment of the animal and raw data.

MP+ index has a large emphasis on fleece weight, moderate for fertility and FD reduction and a small weighting towards an increase in staple strength and body weight.

DP+ index has emphasis on fertility, body weight, carcass traits and fertility while maintaining FD and increasing staple strength.
